## FACTS

### WHAT IS THE CORONAVIRUS (COVID-19)?

Essentially a respiratory illness which is being caused by a new virus, for which a vaccine is still being studied. Symptoms include coughing, sore throat, fever and shortness of breath.

COVID-19 can be very easily spread from one person to another. The most important way to fight against it is good hygiene and disinfection.

### HOW WE CLEAN AND SANITISE

We **deep clean** any public place, work environment, home, school or premises to make sure there is proper disinfection of all surface areas and equipment.

We make use of protective equipment and specialised cleaning tools and methods to carry out extensive deep cleaning.

We use specialist detergents and disinfectants that kills the COVID-19 virus quickly and offer sterilisation protection for a period thereafter.
